Step by Step Instructions

Step #1

With the 6" paper and tape, cover-up all around the headlight area. Tape down the edges of paper so the wind cannot blow paper around.

Step #2

First take the sanding block, sanding the entire surface of the headlight. Some headlights will just have a "yellow layer," others will have a "cloudy layer." Both have to be completely sanded off in the sanding process then take sheet of fine sandpaper and finish sand the entire headlight surface smooth.

Step #3

Then take the white rags and clean the entire headlight surface of dust, Then take the "YELLOW" Tack Rag and wipe-off the dust on the headlight surface !

Step #4

Next take the "Headlight Renew" spray can from your box and shake for 3-4 minutes. Take heat gun and lightly heat headlight surface. Using the spray can, spray an even coat over entire headlight surface. Allow to dry approx. 3-5 minutes. Then apply a second coat evenly over entire surface. (You may want to practice spraying a small amount on a board before going to the headlight.) If a "cloudiness" appears in spray, use a hairdryer/heatgun and heat for 1 minute, "cloudiness" will disappear!

Proceed to the other headlight and repeat process beginning with step # 1. Allow both headlights to let dry for about 5 minutes, and then remove all tape and paper carefully from your automobile using caution not to touch headlights.

**You will see results immediately!
Your headlights look like new!**

Shop Kit Invoice

This is a one year commitment with HeadlightRenewDoctor.com. simply stating that once the "Shop Kit" is gone, that said company will re-order product offered in a "Re-Order Kit" for a one year period.
